

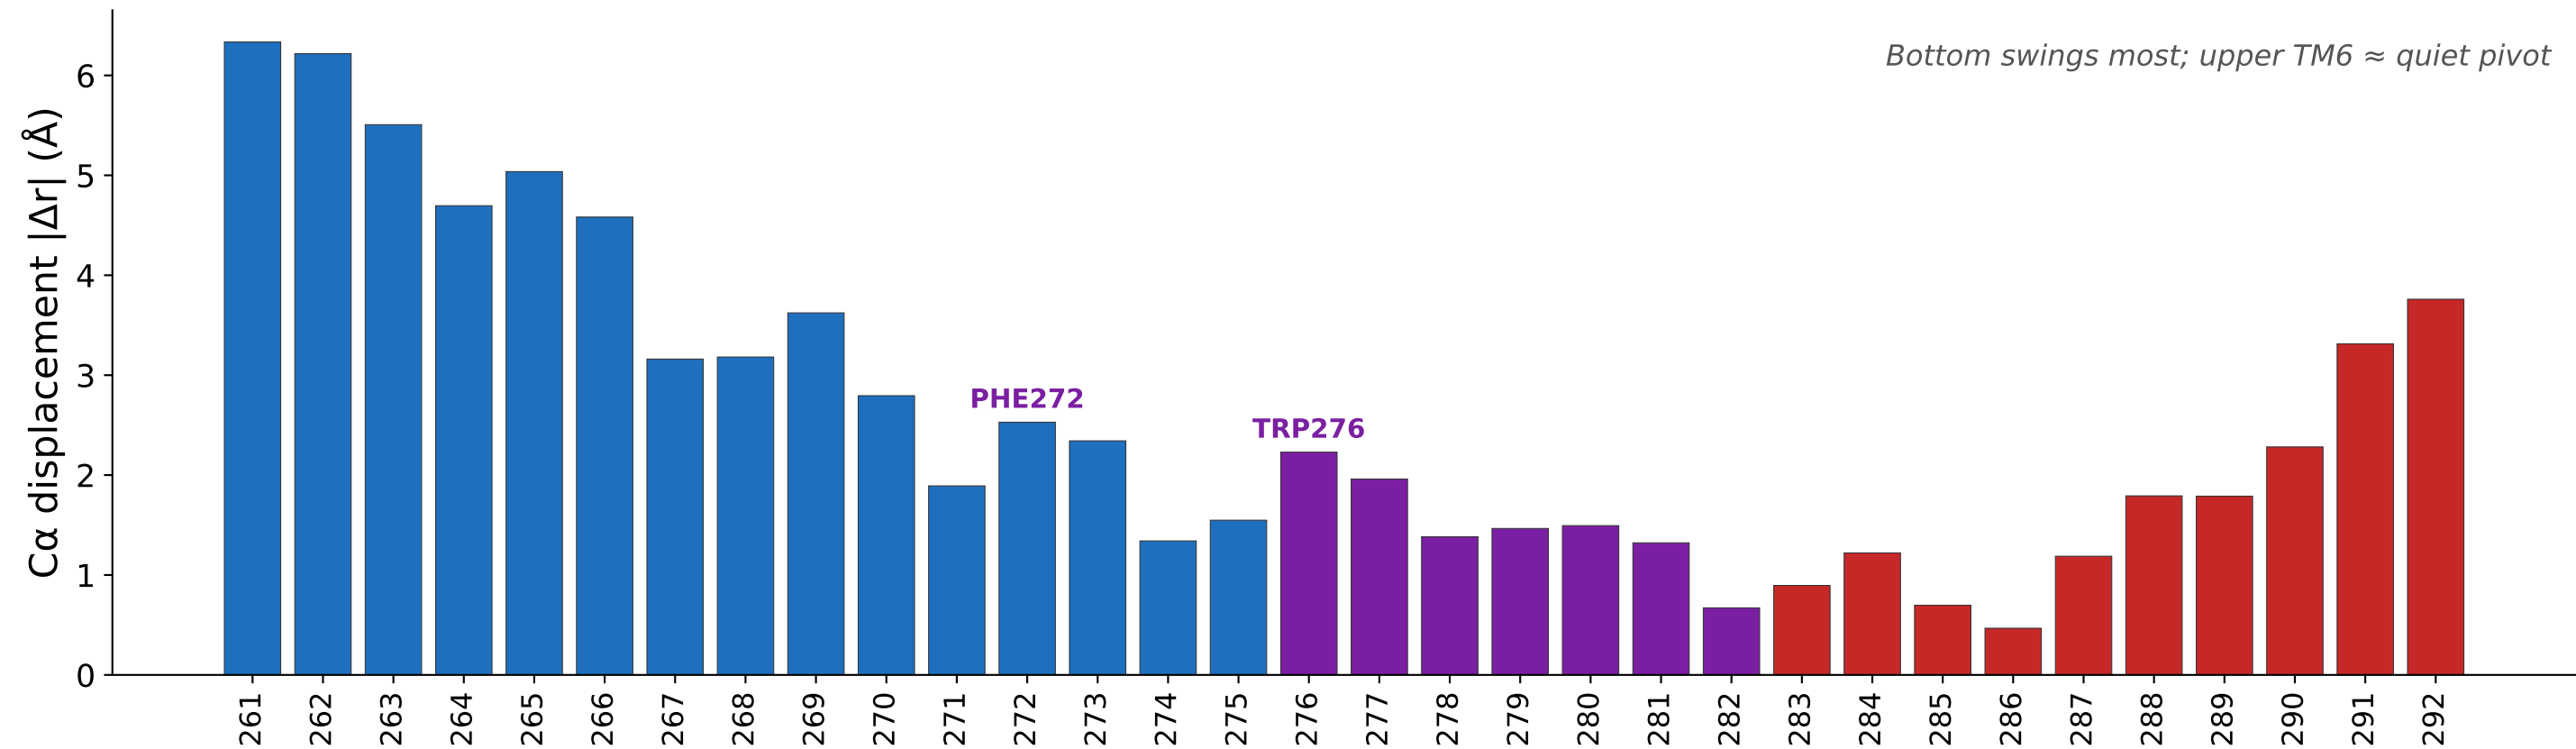

Figure S2

ANM + crystals: TM6 activation motion (direction), and how well the resting structure's intrinsic modes predict it

Crystal transition (6KO5→8JSR superposed, RMSD 2.3 Å). Resting-state ANM soft modes capture 72% of this direction (first 10 modes). Note: a single ANM mode is sign-ambiguous; direction comes from the

(A) How far each TM6 residue moves on activation (6KO5→8JSR, crystals)

(B) Direction of motion: + = outward (away from bundle axis), - = inward
